

Treicee Taufa - Slacks Creek Fire Survivor:

"I want everybody to purchase photoelectric smoke alarms - to be installed in every single home and made mandatory in Australia and hopefully the world. It will save a lot of lives."

So that you all, and other families around Australia, don't have to go through what they've gone through.

Karl Stefanovic: So this all stems from that horrible house fire in 2011 in Logan in south east Queensland when eleven family members lost their lives. So much grief, so much pain for them and so many enquiries, has led to them wanting one thing and one thing only. And that is for us all to be more aware and to be more conscious of smoke alarms and the type of smoke alarms we have. So that you all, and other families around Australia, don't have to go through what they've gone through.

I want everybody to purchase photoelectric smoke alarms - to be installed in every single home.

Treicee Taufa: I want everybody to purchase photoelectric smoke alarms - to be installed in every single home, and made mandatory in Australia and hopefully the world. It will save a lot of lives. I just hope to God that no one else goes through what we went through.

Sitting down with a man who's lost his wife, his daughter, eight grandchildren . . .

Karl Stefanovic: There's no doubt that it was one of the most difficult processes that I've had to go through as a journalist. Sitting down with a man who's lost his wife, his daughter, eight grandchildren and talking to some of those relatives as well who've also lost almost everyone in their immediate family. It was heinous really.

You see that grief - it's right there on the screen that they go through. Just do something about it. They want to reach through and shake you and say look, these are the things you can do here to protect your family and don't go through what we've been through. And I think that's the message.

. . . unscrew the ionization ones, put the photoelectric ones on the roof - and then you've got nothing to worry about.

Just get up from your chair in the lounge room now. Get on the phone or go down to a hardware store. Grab yourself the photoelectric alarms. Bring them back to your house. Unscrew the ionization ones. Put the photoelectric ones on the roof - and then you've got nothing to worry about.

And at the end of the day it's peace of mind and it can save your families life. It really can.

Trailer | 31 seconds

Why the smoke alarm in your home may not save you.

Part One | 9 Minutes

Part Two | 11 Minutes

“Like most of us, I thought the fire alarms fitted in my home would protect my family, but what I’ve just seen is shocking.”

“What will it take for the Board (ABCB) to make that decision to change lives?”
Karl Stefanovic, Reporter | 60 Minutes Australia

“Grab yourself the photoelectric alarms, bring them back to your home, unscrew the ionization ones, put the photoelectric ones on the ceiling. It can save your family’s life.”

Karl Stefanovic, 60 Minutes Reporter
